

KATHMANDU TENTS

NORTHSTAR PLUS PITCHING INSTRUCTIONS

1. Lay out the inner tent, pegging down at least one corner in high winds. Join the pole sections together. It is very important to ensure that each pole section is fully inserted before tension is put on the pole. Failing to do so may lead to splitting at the ends of pole sections.

2. Push the two long poles (coloured green) through the sleeves trimmed with green tape. Next push the the shorter pole (coloured gold) into the sleeve trimmed with gold tape. Insert the locking tip of each pole into the corresponding eyelets.

3. Now tension each of the long poles by grabbing the webbing tape at the base of the inner tent, pushing the pole and inserting the loose pole end into the eyelet in the webbing tape. Now do the same for the short pole. There is a choice of two eyelets to enable a choice of tension. In windy conditions peg out all four corners of the tent.

4. Finally pull the flysheet over the tent and clip the fly corners into the side release buckles on the corners of the inner tent. Tension the fly at the corners so that it sits evenly over the tent and peg out the front points of the vestibule, again tensioning the fly if necessary. Peg out the side elastic points and where conditions require peg out guy lines (guy lines are not attached to fly at time of purchase so this may need to be done before heading out).

PITCHING IN ADVERSE CONDITIONS

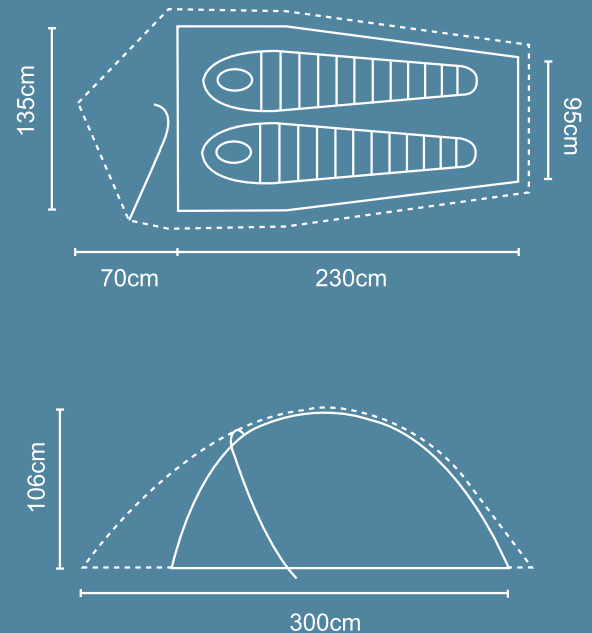

1. When pitching in high winds ensure that everything is fastened down, including the tent bags and fly.
2. If the wind is from a constant direction, work from the upwind side.
3. In wet or windy conditions peg out all storm guys.
4. When pitching in rain it is suggested to cover the pegged down inner with the fly while inserting the poles.

NORTHSTAR PLUS TENT

CONTENTS CHECKLIST

- Tent Inner
- Tent Fly
- 18 Tent pegs in separate stuff sac
- 3 Tent poles in separate stuff sac
- 3 Reflective Guy lines
- Pole Repair Sleeve
- Fabric Patches
- Compression Stuff Sac
